

Proven Results in Long Term Care

The AGE-u-cate CMP-funded grant project has been an overwhelming success. AGE-u-cate Training Institute introduced the Compassionate Touch® program to 3,076 care team members in 115 Certified Medicare and Medicaid Skilled Nursing Providers in North Carolina and Ohio beginning in January 2019. Below are some of the outstanding results through October 2020.

21-27% Decrease in Physical Behavioral Expressions

24-29% Decrease in Verbal Expressions

23% Decrease in other Behaviors

23% Decrease in Rejection of Care

18% Reduction in Anti-Psychotic Medication Use

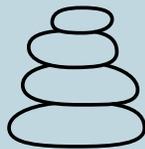

21% Increase Cooperation with Care

A September 2020 Survey of 50 Compassionate Touch Coaches Gave Staggering Results!

72% Reported

"Compassionate Touch has improved the well being of our elders."

80% Reported

"Compassionate Touch equips the staff to better respond to the emotional needs of our elders."

Compassionate Touch® is an approach combining skilled touch and specialized communication shown to prevent behavioral expression in people with dementia and those who are at end-of-life.

Customer Testimonials

We found that one resident who constantly stood up and down multiple times throughout each shift benefited from CT due to leg pain associated with neuropathy. CT helped alleviate the pain and allows this resident to sit and rest for many hours after CT is provided. NC SNF, 10/2019

I have found the CT program a pleasant way to engage our residents in a touch program which is essential to all human life... It thrills my heart to see the positive facial responses from our non verbal residents, and the positive verbal responses from our higher functioning residents. Carmella, OH SNF, 7/2020

I do know the staff enjoyed the training and were excited to work with some of the residents we knew would benefit. We are using it more often now as residents are cooped up and feeling a loss of control. Katie, NC, 5/2020

Residents who have participated seem to be more trusting of the staff and have responded well to the this new tool. I have found that staff members are more "in synch" with their residents on a daily basis since going through the training. The nurses appreciate having another tool that can be used in the plan of care. Not only has this tool been beneficial to the residents that are participating but also to the staff as this has helped give them a different perspective to challenging behaviors in residents with dementia. Jasmine, NC, 11/2019

Thank you again for the wonderful training. I have had many people stop me to tell me how they have gotten to use what they learned already and how they feel it will benefit our residents greatly. Jennifer, OH SNF, 1/2020

We enjoy the calm, quiet times with our residents. It prevents agitation from escalating if it is used right away. During this pandemic, when families are restricted from visiting, Compassionate Touch is a gift to our residents. Donna, OH SNF, 6/2020
